

SHAIKH RAMEEZ

Backend Developer

+91-7738054922 | shaikhrameeznayab@gmail.com | Mumbai, India
github.com/RameezHiro | linkedin.com/in/shaikh-rameez | rameez-portfolio-swart.vercel.app

Profile

Second-year CSE (AIML) student building production backend systems and applied AI/ML projects, not tutorial exercises. Shipped a deployed FastAPI REST API with JWT auth, and an AI-powered platform integrating LLM APIs into a real product. Strong foundation in Python, SQL, and ML mathematics

Education

B.Tech in Computer Science & Engineering - AIML

2025 – 2029

Mumbai University (AIKTC), Mumbai, India CGPA: 9.12

Projects

Task Manager REST API - Backend Engineering Project

2026

github.com/RameezHiro/task-manager-api

- Designed and shipped a full REST API with FastAPI, SQLAlchemy, and JWT-based authentication; deployed live on Render.
- Implemented user auth, protected routes, and relational data modeling with SQLite; handled the full request lifecycle from schema to deployment.

Nexaid - AI-Powered Volunteer Coordination Platform

2026

github.com/RameezHiro/nexaid

- Built an end-to-end platform on FastAPI + Firestore, integrating Gemini 2.0 Flash for AI-driven volunteer matching.
- Deployed backend on Railway and frontend on Firebase Hosting; owned the system from architecture through deployment.
- Diagnosed and resolved a Gemini free-tier quota exhaustion issue in production, and recovered from two credential-exposure incidents via git history rewrites — real incident response under time pressure, not a simulated exercise.

URL Shortener - Backend Engineering Project

2026

github.com/RameezHiro/url-shortener

- Designed a three-entity relational schema (User, URL, Click) with SQLAlchemy, and implemented a Base62 short-code generation algorithm.
- Built POST /urls/shorten (validation, duplicate handling, code generation) and GET /{shortcode} (lookup, active-link validation, 302 redirect) endpoints.
- Implemented click tracking with per-click logging and live click_count updates, using database transactions to keep writes consistent; designed the Click table to support future analytics (geolocation, device, browser, referrer).
- Tested end-to-end via Swagger UI, browser, and curl; core logic complete, deployment pending.

Achievements

- UAi Hawk-A-Thon - Won Judges' Choice Award
- Hacktoberfest 2025 — Won a Swag; contributed to multiple open-source python mini projects

Technical Skills

- Backend & APIs:** FastAPI, SQLAlchemy, JWT Auth, REST API design, Firestore, SQLite, MySQL
- AI/ML:** Gemini API integration, Scikit-learn, NumPy, Pandas, Matplotlib
- Languages & Tools:** Python, Git/GitHub, Google Colab, Jupyter Notebook, VS Code
- Deployment:** Vercel, Render, Railway, Firebase Hosting, Streamlit Cloud
- Math Foundation:** Linear Algebra, Calculus, Probability & Statistics
- GitHub:** 242+ contributions across active repositories
